The concept is easy. A gamer sets a target multiplier (e.g., 2.00 x, 10.00 x, or even 1000.00 x). The game's algorithm then produces a random multiplier. If the created multiplier is **equal to or greater** than the player's target, the bet wins. If it falls short, the bet is lost.

Understanding the Mechanics: House Edge and Probability

In most versions of Limbo, the **house edge** ranges between **1% and 2%**. This suggests that over the long term, the gambling establishment maintains a small percentage of all wagers.

The relationship between the target multiplier and the win opportunity is inversely proportional. As the target multiplier boosts, the win chance decreases considerably.

Example Limbo Multiplier vs. Win Chance Table (Based on a 1% House Edge)

Target Multiplier Statistical Win Chance Potential Payout on £ 10 Bet **1.05 x** 94.28% £ 10.50 **2.00 x** 49.50% £ 20.00 **5.00 x** 19.80% £ 50.00 **10.00 x** 9.90% £ 100.00 **50.00 x** 1.98% £ 500.00 **100.00 x** 0.99% £ 1,000.00 **1,000.00 x** 0.099% £ 10,000.00

As shown in the table, setting a target of 2.00 x provides the player roughly a 50% chance of doubling their cash (minus your home edge), while chasing after a 1,000.00 x multiplier drops the chances to less than one in a thousand.
