What is the Limbo Casino Game?

At its core, Limbo is an online crash-style wagering game, though it differs aesthetically from video games like *Aviator* or *JetX*. Rather of seeing a rocket or an airplane ascend on a graph, gamers exist with a tidy, mathematical interface.

The principle is stealthily basic:

1. The gamer places a wager.
2. The gamer sets a **target multiplier** (e.g., 2.0 x, 10.0 x, or even 1,000 x).
3. The game produces a random multiplier result.
4. If the generated multiplier is **equivalent to or greater** than the target multiplier, the player wins. If it fails, the bet is lost.

The name "Limbo" is originated from the classic party game "How low can you go?"-- other than in this context, players are generally intending as high as their threat hunger will enable.

How Limbo Works: The Mechanics

Understanding the mechanics of Limbo needs taking a look at how possibilities and payouts interact. Unlike conventional slots where the gambling establishment determines the RTP (Return to Player) through complex reels and symbols, Limbo uses transparent, adjustable chances determined completely by the player.

When a player adjusts their target multiplier, the game immediately calculates 2 important metrics:

- **Win Chance:** The analytical probability of striking that target.
- **Payout:** The possible return based on the wager.

The Mathematics Behind Limbo

The majority of trusted crypto gambling establishments offering Limbo operate with a basic **home edge of 1%**, implying the true mathematical likelihood is a little tilted in favor of the home.

Here is a glance at how different target multipliers affect the win possibility and possible payout on a theoretical £ 10 bet:

Target Multiplier Theoretical Win Chance (%) Payout on £ 10 Bet **1.01 x** 98.01% £ 10.10 **2.00 x** 49.50% £ 20.00 **5.00 x** 19.80% £ 50.00 **10.00 x** 9.90% £ 100.00 **50.00 x** 1.98% £ 500.00 **100.00 x** 0.99% £ 1,000.00 **1,000.00 x** 0.099% £ 10,000.00

As the table shows, the greater the target multiplier, the lower the possibility of winning. On the other hand, lower targets use a near 50/50 proposition.
