What is the Aviator Game?

At its core, Aviator is a social multiplayer crash game. The main theme revolves around an increasing multiplier curve that can "crash" at any minute.

When a round begins, a red plane takes off, and a multiplier coefficient begins increasing quickly from **1.00 x**. The objective is deceptively simple: gamers must squander their jackpots before the aircraft flies away. If a gamer cashes out successfully, their bet is increased by the coefficient at the time of the cash-out. Nevertheless, if the aircraft flies away before they squander, the bet is lost.

Key Characteristics of Aviator

- **Real-Time Action:** Rounds occur quickly, generally lasting anywhere from a few seconds to less than a minute.
- **Social Interaction:** Players can see other individuals' bets and cash-out points in real-time by means of the live chat function on the side of the screen.
- **Provably Fair Technology:** The game uses cryptographic technology that enables gamers to verify the fairness of each and every single round.

2. **View the Plane Take Off:** Once the betting window closes, the aircraft removes, and the multiplier begins climbing from 1.00 x upwards.

3. **Cash Out:** Players should monitor the rising multiplier and click the "**Cash Out**" button before the plane disappears off the screen.
4. **Collect Winnings:** If successful, the payout is instantly contributed to the gamer's balance. If the airplane flies away (crashes) initially, the stake is forfeited.

Popular Strategies Used by Players

While Aviator is basically a game of chance dictated by a Random Number Generator (RNG), gamers typically utilize different bankroll management methods to structure their gaming sessions.

Because the game permits gamers to position 2 bets simultaneously on the same round, many utilize a hybrid technique:

- **Bet 2:** Managed manually, intended at catching a greater multiplier (e.g., 5x or 10x) for a revenue increase.

2. The Conservative Approach (Low Multiplier Hunting)

This method includes cashing out regularly at extremely low multipliers (1.20 x - 1.30 x). While the individual wins are small, the analytical likelihood of the aircraft crashing *before* 1.20 x is fairly lower, resulting in a higher win frequency. However, a single crash before the target can erase numerous previous gains.

3. The Martingale Strategy (High Risk)

Adapted from roulette, this technique involves doubling the bet size after every loss so that a single win recovers all previous losses **Great site** plus a profit.

- *Warning:* This technique needs an enormous bankroll and can quickly strike table limits or deplete funds throughout a long losing streak.
