What is the Limbo Casino Game?

Limbo is an instant-win casino game promoted largely by crypto-focused online gambling establishments. Inspired by the "Crash" mechanic, Limbo removes the rising rocket or line chart, replacing it with a single, instant outcome.

When a gamer opens a Limbo game, they are provided with 2 main inputs:

1. **The Bet Amount:** How much cash they wish to bet on the round.
2. **The Target Multiplier:** The specific multiplier they hope the game will strike or exceed (e.g., 2x, 10x, 100x, or even 1,000,000 x).

As soon as the player clicks the "Bet" or "Roll" button, the game instantly creates a random number. If the produced number is **greater than or equal to** the target multiplier, the gamer wins. If it falls below, the bet is lost.

How the Game Mechanics Work

At its core, Limbo is a game of likelihood. Unlike slots, where symbols determine wins, Limbo relies entirely on mathematics and possibility percentages.

When a player sets a target multiplier, the game instantly determines 2 important metrics:

- **Win Chance:** The mathematical probability of hitting that specific multiplier.
- **Payment:** The overall return if the target is reached (Bet £ \ times £ Target Multiplier).

Example of Limbo Mechanics

To understand how target multipliers affect gameplay, think about the list below standard setup (which normally includes a 1% house edge):

Target Multiplier	Win Chance (%)	Potential Payout on £ 10 Bet
1.10 x	90.90%	£ 11.00
2.00 x	50.00%	£ 20.00
5.00 x	20.00%	£ 50.00
10.00 x	10.00%	£ 100.00
50.00 x	2.00%	£ 500.00
100.00 x	1.00%	£ 1,000.00
1,000.00 x	0.10%	£ 10,000.00

10,000.00

As displayed in the table, as the prospective payment increases, the win opportunity reduces proportionally.
