Table: Common Tower Game Mechanics and Their Strategic Value

Mechanic	Description	Strategic Value/ Pro-Tip
Pathing/ Mazing	Forcing enemies to walk a longer route using positioned towers. Makes the most of the "time-under-fire" for your damage dealerships. Develop serpentine paths instead of straight lines.	
Targeting Priorities	Setting towers to target the <i>First, Last, Strongest, or Weakest</i> opponent. Avoids overkill on weak minions and makes sure heavy-hitters are focused down early.	
Resource Economy	Generating currency (gold/energy) by means of kills, interest, or dedicated farms. Balance investment: spending excessive on defense starves you of development; hoarding gold causes being overwhelmed.	
Elemental Weaknesses	Matching specific damage types (Fire, Ice, Lightning) to opponent armor types. Ice slows fast units; Fire deals damage-over-time to high-health targets. Exploit these multipliers.	
Active Abilities	Worldwide spells (meteor strikes, freezes, supports) with cooldowns. Conserve these for "employer waves" or emergency situation leaks where basic towers fail.
