CS2 gambling platforms operate primarily on a peer-to-peer (P2P) economy or through Steam API combination. Instead of wagering conventional fiat currency (like GBP or EUR) directly on every site, users normally deposit CS2 skins, which are valued in website credits or cryptocurrency.

When a user transfers a skin, the platform's bot trade system takes the product. The user's account is then credited with a matching balance based on existing market price. When withdrawing, the process is reversed: users trade their site balance for brand-new skins supplied by the platform's inventory.
