Unlike standard sports betting, the CS2 wagering environment is special since it typically uses digital properties-- particularly, in-game weapon skins-- along with conventional fiat currency and cryptocurrency.

Gamers and bettors have several different ways to take part in CS2 betting. Platforms generally deal with different choices, varying from casual skin betting to conventional sportsbook-style wagering.

1. Match Winner (Moneyline)

2. Handicap Betting

To make matches in between heavily favored groups and underdogs more interesting, platforms introduce rounds or map handicaps. For instance, Team A may start with a -1.5 map handicap in a Best of 3, meaning they should win 2-0 for the wager to be successful.

3. Proposition (Prop) Bets

These are wagers on particular in-game occasions rather than the last match result. Popular prop bets consist of:

- Which group will win the handgun round?
- Will there be an overtime on Map 1?
- Total variety of rounds played (Over/Under).
- Which gamer will protect the most kills (MVP)?

4. Skin Gambling and Coin Flip Games

Beyond traditional esports wagering, peer-to-peer and house-edge sites use mini-games where users wager virtual weapon skins straight. Games include roulette, crash, coin flips, and prize formats.
