What Is a Crash Casino Game?

At its core, a Crash game is a real-time wagering video game where a multiplier (frequently represented by a rocket, a balloon, or an ascending line) starts at 1 × and increases continually. Gamers position their bets before the round begins and need to decide when to "cash out" before the multiplier "crashes" (i.e., stops abruptly). If a player cashes out before the crash, they win their stake increased by the current multiplier. If the crash takes place before they [csgo crash gambling](#) cash out, the bet is lost.

The appeal depends on the blend of luck and threat management: the longer you await a higher multiplier, the higher the potential reward, but the risk of losing the entire bet likewise rises.

How Crash Games Are Structured

1. **Betting Phase**-- Players put one or more bets within a set time window (normally a few seconds).
2. **Multiplier Phase**-- After betting closes, the multiplier starts to increase from 1 × up.
3. **Cash-Out Decision**-- Players can manually squander at any time, locking in their profits.
4. **Crash Event**-- The multiplier stops arbitrarily; the specific crash point is determined by a provably reasonable algorithm.
5. **Settlement**-- All uncashed bets are lost; winners receive their payment instantly.

Because the crash point is created by a random number generator (RNG) that is publicly proven (e.g., through a "provably fair" system), the video game is transparent and fair.
