Once the deposit is confirmed on the network-- usually within minutes-- the gamer gets a matching balance in the casino's internal ledger.

Betting and payments are managed via wise agreements or internal systems that record each wager and result on-chain. Many platforms also employ *Provably Fair* algorithms, allowing users to validate the integrity of each game round by examining cryptographic hashes. Withdrawals follow the very same pattern: the casino transfers the gamer's staying balance back to an external wallet, and the deal charge is usually a fraction of a cent, thanks to low-cost blockchain networks.

- **Wallet Integration:** Hot wallets (online) and cold wallets (offline) shop player funds, with the majority of assets kept in freezer for security.
