Each time the ball strikes a peg, it has an approximately 50% opportunity of going left and a 50% chance of going right. This develops a **binomial distribution** (frequently imagined as a Galton board).

- **The Center:** Because there are numerous courses for the ball to reach the center, the main slots are hit most often. Consequently, these slots normally provide lower payouts (typically less than the initial bet, such as 0.5 x).
- **The Edges:** The outermost slots are statistically the hardest to reach since the ball needs to bounce regularly in one instructions (all left or all right) to get there. To balance this, the external edges provide massive payouts, in some cases surpassing 1,000 x the preliminary wager.

- *High Risk:* The center slots heavily punish the player (frequently yielding 0.2 x or 0.3 x returns), however the outer edges unlock life-altering multipliers.

2. Row Count (8 to 16):

- Fewer rows (e.g., 8) suggest a smaller sized board, fewer possible outcomes, and more foreseeable gameplay.
- More rows (e.g., 16) broaden the pyramid, drastically increasing the optimum possible multiplier while making the severe edges even harder to hit.
