When a gamer clicks the "Play" button, a virtual chip is launched from the top of a triangular pyramid filled with pegs. As the chip descends, it bounces off these pegs in a randomized, chaotic course until it lands in among the slots at the bottom. Each slot is assigned a specific multiplier. If the chip lands in a slot with a value greater than 1.0 x, the gamer wins; if it lands in a slot lower than 1.0 x, the player loses a part of their stake.

### Modification Options

Unlike many standard slots, Plinko provides the gamer an unexpected quantity of firm. By changing the settings, gamers can dictate the volatility of their session:

- **Low Risk:** The multipliers in the center are lower, however the external multipliers are rarely zeroed out. This is ideal for long, constant play.

- **High Risk:** The multipliers on the edges can reach massive heights (often 1000x or more), but the center slots typically lead to a loss. This is for gamers going after the "big win."
