Hand Sign Ideal Frequency Weak Against Strong Against **Rock** 33.3% Paper Scissors **Paper** 33.3% Scissors Rock **Scissors** 33.3% Rock Paper

Nevertheless, human beings are infamously bad at being really random. This human element is precisely what bettors make use of to get an edge.

- **The Loser's Shift:** When gamers lose, they rarely toss the very same indication a 3rd time. Instead, they typically move to the sign that *would have beaten* what just beat them. For example, if a gamer loses with *Scissors* to *Rock*, they will likely throw *Paper* next.
- **The "Rock" Bias:** In the absence of thought, untrained players toss *Rock* more frequently than Paper or Scissors due to the fact that the hand begins in a clenched fist position, making it a subconscious default.
- **The Gambler's Fallacy:** If a gamer tosses *Paper* three times in a row, challengers typically presume they are "due" to throw something else, leading to predictable counter-moves.
