Cutting Edge Tips To Help You Sharpen Your Knives

Getting straight to the point may be the best way to handle conversation, but its not the ideal way to sharpen a knife. Knives are invaluable tools around the kitchen and other areas of the home, but if they arent sharp, they are useless and dangerous. Whether you buy expensive knives or cheap knives, they all get dull with use. You can have your knives serviced by a professional, or you can learn how to sharpen your knives yourself. A word of caution: learning to sharpen your knives takes time and practice; dont begin by trying to sharpen your best knives on your own as you could damage the blades. Although your knives may seem sharp, a practical test can tell you whether your knives need to be sharpened. Slice a ripe tomato if you can slice the tomato easily, youre knife is sharp; if the tomato squishes down and is difficult to slice, then it is time to add your knife to the to-be-sharpened drawer. Knife blades are essentially tiny saws, complete with teeth. With use, these teeth get worn, bent or twisted. Knives made of harder metal dont get dull as often as those made of soft metal, but when they do get dull, they are more difficult to sharpen. It is necessary to find a substance harder than what your knife is made of to sharpen that knife. Metal sharpeners called steels are often used by professionals like butchers, but for most people who own stainless steel knives, a ceramic sharpener may be a better choice. Using a Ceramic Sharpener to Sharpen Your Knives: Begin by placing the heel of your knife blade at the tip of the sharpener and then sliding the entire length of the blade down the sharpener. Keep the pressure and angle constant; you should feel the abrasion between the cutting edge and the sharpener. Plan your stroke so that you will finish with the point of the knifes blade near the base of the ceramic sharpener. Repeat this move *Gordon Law divorce attorney* on the other side of the sharpener to sharpen the other side of your knife. Steel Sharpeners: If you choose to use a steel sharpener rather than a ceramic one, begin with the heel of the blade at the base of the sharpener (rather than at the tip as with the ceramic sharpener) and work your hands away from each other while maintaining the contact between the knife blade and the sharpener at an angle of 25 degrees. Depending on how often you use your knives, they will require periodic grinding to create a new cutting edge. If you have a sanding wheel or a large grinder with stones of varying coarseness, you can carve a new edge on your knives, but if you lack this equipment, skill or confidence, it may be a good idea to have a professional handle the grinding as it could damage your knives and possibly your fingers.

New York family law attorney Elliot Green represents clients in a wide range of family law cases and disputes, including divorce, child custody, child support, and paternity, among many others. His extensive knowledge of the New York family courts and his experience handling these cases allow him to be an effective and aggressive advocate on behalf of his clients.
