- **Scissors** (a fist with the index and middle fingers extended) cut Paper.
- **Paper** (a flat hand) covers Rock.

In a betting context, gamers stake real money, cryptocurrency, or platform-specific tokens on each round. The video game can be played in a simple **best-of-one** format or extended into a **match series** (e.g., best of three or five) to decrease variation.

Video game theory, particularly the **Nash Equilibrium**, dictates that the ideal unexploitable method is bitz.io to select Rock, Paper, and Scissors with total randomness, each at a frequency of 33%. If a gamer deviates from this by favoring one shape, an observant challenger can mathematically make use of that bias.

In live or webcam-based betting settings, players typically attempt to affect their challenger's subconscious choices. Verbally meaning a particular move-- such as saying, "*I'm absolutely throwing Rock this time*"-- can deceive the opponent into either calling the bluff or overthinking their counter-move.
