Core Mechanics at a Glance

- **The Grid:** The game is generally presented as a pyramid or vertical grid made up of several rows (tiers) and columns.
- **The Choice:** In each row, the player should pick one (or more) tiles.
- **The Outcome:** Uncovering a safe tile increases the multiplier and permits progression to the next row. Revealing a hidden hazard or trap ends the round, resulting in the loss of the current bet and any accumulated profits.

How to Play: A Step-by-Step Guide

Playing the Tower game is remarkably straightforward, making it available to beginners. Here is a basic breakdown of how a round unfolds:

1. **Set the Stake:** Before starting the climb, the gamer picks their wager amount for the round.
2. **Select the Difficulty/Mode:** Many tower video games permit gamers to pick a problem setting (e.g., Easy, Medium, Hard, or Daredevil). This changes the number of safe tiles versus hazardous tiles in each row, directly altering the volatility and prospective payments.
3. **Make the First Move:** Click on among the tiles in the bottom row.
4. **Ascend or Cash Out:**

- If a safe tile is revealed, the player relocates to the next tier up. They can now select to **Cash Out** and protect their profits or continue climbing.
- If a trap is exposed, the round ends right away, and the stake is surrendered.

5. **Reach the Top:** If a player effectively navigates all rows without hitting a trap, they hit the optimum multiplier of the tower, and the game automatically pays the leading reward.
