A player drops a ball from the top of the pyramid, and as it comes down, it bounces off the pegs in a seemingly unpredictable path before landing in among the slots at the bottom.

Each slot at the base of the board is designated a specific multiplier. The slots in the center (where the ball is most likely to land) typically offer lower returns, while the slots towards the edges-- which are harder to hit-- deal substantially higher multipliers.

The Mechanics of the Game

Unlike standard casino games like poker or blackjack, which require skill and strategic decision-making, Plinko is categorized as a "Provably Fair" or RNG (Random Number Generator) game. The result of every drop is figured out by complicated algorithms, guaranteeing that each bounce is randomized and independent of previous outcomes.
