Together with this ascent, a multiplier increases from **1.00 x upwards**.

The core objective is deceptively easy: **cash out before the multiplier "crashes."**

If a player effectively cashes out at 2.50 x, they double their money (minus a minor house edge). Nevertheless, if the crash takes place before they struck the cash-out button, their entire stake for that round is lost. The crash can take place practically immediately at 1.00 x, or it can climb up into the thousands-- however high multipliers are extremely unusual.

3. **The Decision:** Players enjoy the multiplier climb. They must decide when to strike the "Cash Out" button. Greed dictates staying in longer for a bigger payment, while caution urges an early exit.
4. **The Crash:** At a completely random, algorithmically figured out minute, the game crashes.
5. **The Outcome:** Anyone who squandered prior to the crash wins their bet increased by that specific cash-out rate. Anybody who stayed in loses.
