What is the Limbo Casino Game?

At its core, Limbo is an online crash-style betting game, though it varies visually from games like *Aviator* or *JetX*. Rather of enjoying a rocket or an airplane ascend on a chart, gamers exist with a tidy, mathematical interface.

The concept is deceptively basic:

1. The gamer puts a wager.
2. The player sets a **target multiplier** (e.g., 2.0 x, 10.0 x, or perhaps 1,000 x).
3. The game creates a random multiplier result.
4. If the created multiplier is **equal to or higher** than the target multiplier, the gamer wins. If it fails, the bet is lost.

The name "Limbo" is stemmed from the traditional parlor game "How low can you go?"-- except in this context, gamers are generally aiming as high as their danger appetite will enable.

How Limbo Works: The Mechanics

Understanding the mechanics of Limbo requires taking a look at how possibilities and payouts communicate. Unlike standard slots where the casino determines the RTP (Return to Player) through complex reels and signs, Limbo offers transparent, adjustable odds determined totally by the player.

When a gamer changes their target multiplier, the game instantly calculates two important metrics:

- **Win Chance:** The analytical probability of striking that target.
- **Payout:** The possible return based upon the wager.

The Mathematics Behind Limbo

Most reputable crypto casinos providing Limbo run with a basic **house edge of 1%**, meaning the real mathematical probability is slightly tilted in favor of your home.

Here is a quick appearance at how different target multipliers affect the win possibility and possible payment on a hypothetical £ 10 bet:

Target Multiplier Theoretical Win Chance (%) Payout on £ 10 Bet **1.01 x** 98.01% £ 10.10 **2.00 x** 49.50% £ 20.00
5.00 x 19.80% £ 50.00 **10.00 x** 9.90% £ 100.00 **50.00 x** 1.98% £ 500.00 **100.00 x** 0.99% £ 1,000.00 **1,000.00 x**
0.099% £ 10,000.00

As the table illustrates, the higher the target multiplier, the lower the probability of winning. On the other hand, lower targets use a near 50/50 proposition.
