2. **Conversion:** The site values the skins in real-world currency (GBP, EUR) or site coins.
3. **Wagering:** Players place bets on which color the wheel will arrive at before the timer ends.
4. **The Spin:** The wheel spins digitally, and the winning color is determined by a provably fair algorithm.
5. **Payment:** Winners receive a payout proportional to the chances of their selected color, while losers forfeit their staked items/coins.

Comprehending Wheel Variations and Odds

Different platforms offer unique twists on the timeless formula. The payment structure directly associates to the mathematical likelihood of striking a particular color. Below is a breakdown of the most typical roulette variations found across CS2 betting platforms.

Standard 3-Color Roulette (Red, Black, Green)

Color Segment Payment Odds Approximate Probability Home Edge (Typical) **Red** 2x 47.5% ~ 5% (due to Green)
Black 2x 47.5% ~ 5% (due to Green) **Green** 14x 5.0% ~ 5%
