Understanding CS2 Case Mechanics

To the casual observer, opening a case is easy: buy a case, buy a secret, click open, and collect a skin. However, Valve's system is governed by rigorous, behind-the-scenes likelihoods that determine every drop.

When a gamer uses a key (costing approximately £ 2.50 GBP) on a matching case, the game's server rolls a randomized number to determine the rarity tier of the item. Once the rarity tier is locked in, a 2nd randomized roll picks the particular item within that tier, factoring in whether the product will feature a "StatTrak™" counter (which tracks kills) or a particular wear condition (float value).

The Mathematics Behind the Drop Rates

Valve does not formally release the drop rates for cases in every area due to differing local laws, however substantial neighborhood data mining and main disclosures (such as those needed in China) have actually revealed the standardized chances.

Rarity Tier	Approximate Drop Rate	Description
Customer Grade (White)	N/A	Base weapons, seldom discovered in standard cases.
Industrial Grade (Light Blue)	79.92%	The most common drop; often referred to as "blues."
Mil-Spec (Dark Blue)	15.98%	Common drops, slightly higher worth than blues.
Limited (Purple)	3.20%	Uncommon products, typically the economical favorites.
Classified (Pink)	0.64%	Rare items; typically high-tier weapon surfaces.
Covert (Red)	0.16%	Extremely unusual; flagship weapon skins for the case.
Unique Item (Gold)	0.26%	The jackpot tier, consisting of knives or gloves.

Keep in mind: There is roughly a 10% chance for any dropped item to include the StatTrak™ technology, which cuts the base odds of that specific product in half again.

Drift Values and Wear Conditions

Landing an unusual red or gold skin is only half the battle. As soon as an item is won, its visual quality is determined by its **Float Value**-- a number in between 0.00 and 1.00 that dictates wear and tear.

Players need to acquaint themselves with the 5 official wear classifications:

1. **Factory New (FN):** 0.00-- 0.07 (Pristine, very little scratches)
2. **Minimal Wear (MW):** 0.07-- 0.15 (Slight acnes or endure edges)
3. **Field-Tested (FEET):** 0.15-- 0.38 (Noticeable scratches and dullness)

4. **Well-Worn (WW):** 0.38-- 0.45 (Significant wear and texture loss)

5. **Battle-Scarred (BS):** 0.45-- 1.00 (Extremely worn, often significantly changing the skin's look)

Some skins in fact look much better or preserve their worth well in Field-Tested condition, while others drop in cost if they aren't Factory New.

The Economics: Opening Cases vs. Buying Singles
